Value Proposition

Why RAK?

Solution for Maximizing Space Efficiency

Agility

Rak offers unparalleled agility, allowing you to easily rearrange and reconfigure your work or living space. With a simple push or pull, you can quickly create open collaboration areas, defined focused work zones, or adjust privacy levels based on your needs. This flexibility empowers you to optimize in any environment.

Functioning both as boundaries and interactive tools for collaboration, the RAK brings agility to every square inch of the office. Place them near underutilized areas to help people optimize their privacy and productivity.

Collaboration

Rak facilitates spontaneous team collaboration by enabling you to seamlessly shift between individual work and group activities. Whether you need to bring people together for a brainstorming session or quickly separate into smaller focused groups, **Rak** adapt to your changing needs. This promotes open communication, idea sharing, and collective problem-solving, driving innovation and productivity.

Innovation

Rak can be customized with variety of features to support innovative work practices. From writable surfaces for collaborative ideation to built-in technology like digital displays or charging stations, these versatile shelves can be tailored to your specific requirements. This encourages the cross-pollination of ideas, facilitates the prototyping of new concepts, and empowers your team to push the boundaries of what's possible.

Architects continue to balance their desire for aesthetic consistency with the need to create a unique identity for each client, expressing their specific cultural background. Although system furniture provides a common touchpoint, the demand for different applications, colors, materials, and finishes is constantly increasing. New standards, visualizations, and customization systems need to be flexible enough to accommodate various requests, but also simple enough to be accepted.

Create environments in a whisk

With the RAK Agile Wall, people can quickly create a place for collaboration whenever they feel inspired. It slides easily into place, functioning as a wall boundary that defines space and as a surface for sharing and ideating.

Functioning both as boundaries and interactive tools for collaboration, the RAK brings agility to every square inch of the office. Place them near underutilized areas to help people optimize their privacy and productivity.

Empower every corner of the office

Create a high-powered space for collaboration. RAK pairs with the other UFOU collaboration furniture so people can get together and share ideas at a moment's notice, whether it's in person or a team

Pair up to power teamwork
